Internet Explorer Security Notices

When using Internet Explorer, you may have noticed a security warning box appears whenever you click a link that takes you away from Blackboard (secure site) to another website (non-secure).

This is a standard notification within Internet Explorer that lets the user know that they are traveling to a non-secure website. Students may receive this message if they are using Internet Explorer as their Web Browser. You have several options available to you in handling these errors.

### If you are using Internet Explorer 7

![Security Information](image)

Click "YES" to continue and display the page. You will be taken to your content as normal.

### If you are using Internet Explorer 8

![Security Warning](image)

Click "NO" to continue and display the page. You will be taken to your content as normal.

If you are using IE 8, be sure to enable [Compatibility Mode](#) by selecting the Compatibility Mode icon on the tool bar. This will help to avoid problems when using Blackboard.

Furthermore, you can [disable this warning](#) in your IE 7 or IE 8 Web Browser. This information is also available for students on the [Student Support page](#).

These step-by-step instructions can also be found on the [Blackboard home page](#) prior to login (i.e. the last link in the “Welcome to Blackboard Release 9” box).

Alternatively, if you do not want to receive these types of notifications when browsing Web sites, use [Mozilla Firefox Web browser](#).
